## Francisco Miguel Peretti

Programmer and Web Developer

I aspire to get to work with a lot of **new technologies** and frameworks, and never stop **learning**.

Im interested on **growing as a developer** and on taking advantage of every work and learning **experience** I get to have.

I'm a **social** person, I have great capacities on sliding into new work teams as with keeping **communication** with my colleagues.

I consider myself **creative**, I believe thats very useful to accomplish my job.

**Experience****▪ FullStack Developer**

**Southward Solutions** *Buenos Aires, Argenitna*

July 2020 - Present

**Description:**

- Project analysis and design
- CRUD applications development
- Migration and update of legacy projects into new frameworks
- Vue.js components development
- Debugging and troubleshooting of my own and someone else's code

**Technologies in Use:**

- JavaScript
- Vue.js
- HTML 5
- CSS 3
- Element (components library based on Vue)
- JAVA
- axios API
- Hibernate
- node.js
- tomcat (server)

**Programs in Use:**

- VS code
- Eclipse IDE
- SQL Server
- Navicat

**Repositories:**

- Git
- SVN
- gitLab

**Education****▪ Bachelor of Computer Science**

**UBA. Facultad de Ciencias Exactas y Naturales.** *Buenos Aires, Argenitna*

2019 - Not yet finished

**▪ High School Degree with Accounting Specialization**

**Escuela Superior de Comercio Carlos Pellegrini** *Buenos Aires, Argenitna*

2013 - 2018

**Projects**

**Discord Bot (VOIP App): -2019** I made a **bot** using node.js, javaScript and the open source Discord **API**, it ran on a **local server** and it would play games with the user interpreting custom command inputs. as a **BattelShip game with emojis, tic tac toe**, and so on.

**Administration System made with PHP MySql for entrepreneur: -2018**

- I designed and implemented a tool to help organize data.
- Based on MySQL, PHP, HTML and CSS

**React CRUD WebApp for local startup: -2021**

React.js JavaScript HTML CSS and MaterialUi component Library for the Frontend. Axios API, and EXPRESS.js for the request management, and Node.js for the backEnd, DB on SQL.

The application intends to help the people to manage and organize their data (sales, stocks, products, material lists, user data, appointments...etc), aswell as in visualizing all their data in a friendly way.

[This project also allowed me to learn more about the react framework and build lots of very useful components i could use in the future]

**Certifications & Courses****"Aprendé Programando": -2016**

Course given by the local goverment of Buenos Aires city, where they taught the basics of Web development.

**Degree:** JR Fullstack Developer

**Fullstack Codecademy Course -2016**

- *HTML 5*
- *CSS 3*
- *JavaScript*
- *node.js*
